Ring size gauge

ivebeen3d.com · US and Colombian sizes

Print at 100%, "actual size", without "fit to page".

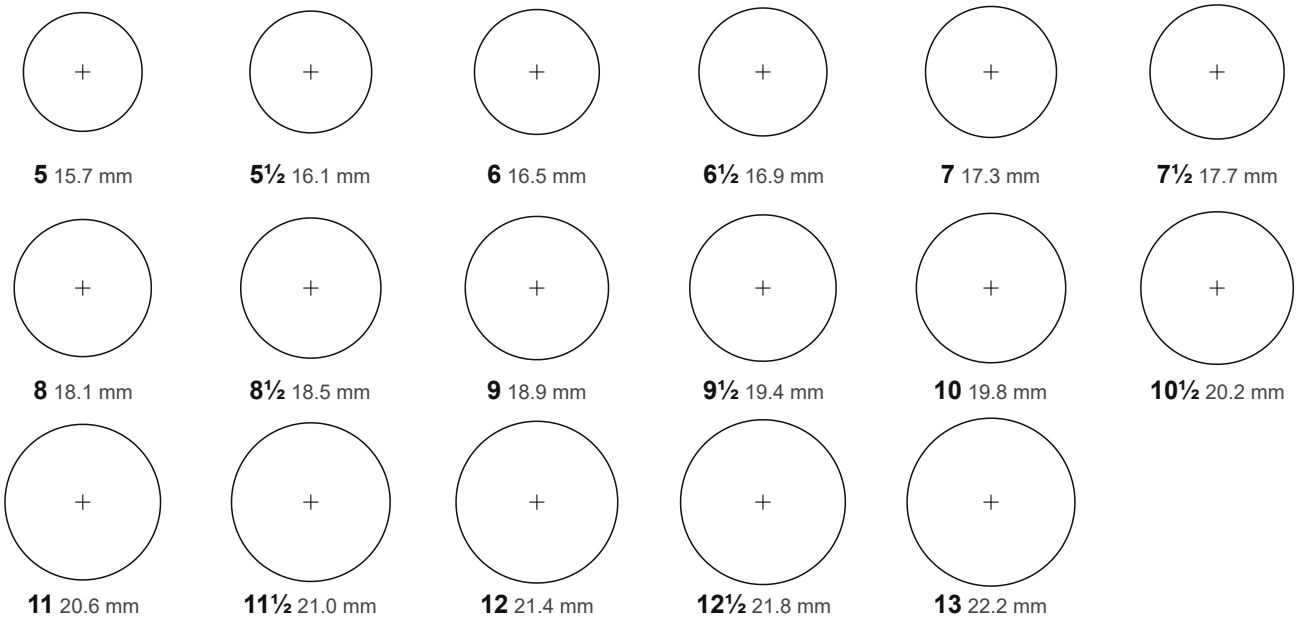

1. Before using it, check the scale

This line is 100 mm long: measure it with a ruler. If it is not 100 mm, print again at 100%: a gauge out of scale changes your size.

2. With a ring that already fits that finger

Place the ring on the circles. Your size is the circle whose line sits just inside the inner edge of the ring, with no paper showing between them.

3. If you have no ring: the strip

Cut the strip along the dotted line. Wrap it around the base of your finger, numbers facing out, without squeezing. Your size is the mark right under the 0 end.

A bank card fits exactly in this box. If it is bigger or smaller, the sheet printed at another scale.

So the size is right

- Measure in the middle of the afternoon, with your hands at a normal temperature, and repeat on another day before deciding.
- Measure the same finger of the same hand you will wear it on.
- If your knuckle is wider than the base of the finger, measure both and pick a size in between, closer to the knuckle's.
- The Hinge Ring is 5.5 mm wide: if you fall between two sizes, pick the larger one.

Would you rather have a real one? If you order the ring in Bogotá, we send you the 3D printed gauge for free before casting; outside Bogotá you only pay for shipping. hola@ivebeen3d.com
